Virtualising, Compliance and Government

Referenseareas: AZ-900

Description

The education was structured around the model blended
learning, i.e. lectures have been interspersed with labs and self-
studies. The purpose of the training is to give the participants a
deeper insight into the .NET framework and then also cloud
management and database management.

The current main language has been C#

2020 - Ongoing
Malmö

Client System

Personal Project

Building modular system with aim at speeding up all platform front end development and also exploring the possibilities of Flutter development. Have applied state management, routing, injection and partial separation of modules. Also have Unity 3D flutter plugin in the project.
